## **FOR IMMEDIATE RELEASE**

### ***SUPER COMPACT, FEATURE PACKED 200W AC/DC POWER SUPPLY***

Power Sources Unlimited announces the CFM200S Series of 200W super compact (4" x 6" x 1.5") AC/DC power supplies which fit easily into 1U high OEM designs or any application where space is critical.

The CFM200S Series features a power factor corrected, universal 90-264VAC input. Ten models provide single outputs from 3.3VDC to 48VDC. Units may be ordered in a U-channel configuration or with an optional cover/fan assembly.

Efficiency is 80% typical, line and load regulation are specified at 1% each, and operating temperatures are from 0°C to +70°C (derated after +50°C). Feature packed, the CFM200S has single wire current sharing, remote sense, AC OK and DC OK signals, and remote on/off. Comprehensive protection circuitry is inherent in the design.

Worldwide safety compliance to EN60950-1 (Information Technology Equipment) standards, RoHS compliance, and a high MTBF make the CFM200S Series ideal for applications such as instrumentation, process control, and communications.

Units are competitively priced, starting at only \$73.00 for OEM quantities. Full specifications and online procurement is available at <http://www.psui.com>, or contact us at 800-966-7784, [sales@psui.com](mailto:sales@psui.com).
