FOR IMMEDIATE RELEASE

POWER SOURCES UNLIMITED FEATURES FLATPACK 1500 1U RECTIFIERS AND POWER SYSTEMS

Power Sources Unlimited, a technical distributor of power supplies and power related products, announces the Eltek Flatpack 1500 rectifier and power systems for telecom installations and industrial applications.

The Flatpack 1500 rectifiers are compact in size (8.43" x 9.57" x 1.64"), feature high immunity against surges and overvoltage, and are designed to endure extreme operating conditions. They accept input voltages from 85-310VAC and provide an output of 48VDC/31A. Models providing a 24VDC or 60VDC output are also available. The Flatpack 1500 rectifier is UL recognized, CE marked and NEBS Level 3 Certified.

The Flatpack rectifiers are suitable for stand-alone use or for parallel operation in racked and un-racked power systems. To speed delivery of the popular Flatpack power systems, a quick-turn stocking/delivery program has been developed. These "standard" Flatpack systems include multiple Flatpack rectifiers along with a core section that integrates the AC main input terminals, alarm relay contacts, the MCU (monitoring and control unit), LVD contacts, current shunts and all interconnecting bus work.

Flatpack 1500 rectifier pricing is \$615.00 and the Flatpack power system pricing starts at \$2,350.00 (not including rectifier price). For sales or applications inquiries, please contact Power Sources Unlimited at 800-966-7784, email to sales@psui.com or visit www.psui.com.
